HARNISCH+RIETH
DENTAL LABORATORY TECHNOLOGY

Reliability has a name

Since 1964, we have been manufacturing high-quality dental equipment at our engineering plant, so that dental technicians can work in the lab with precision and efficiency.

It is important to us that every component and every work step is of the highest quality. In order to preserve this tradition, we have remained a family-run company to this day, and are currently in our second and third generation.

We have a flat organisational structure and encourage each employee to exchange ideas with our technical and sales managers. This gives our employees detailed knowledge of every step of production and creates and maintains a feeling of responsibility for quality in every individual employee.

This way, we can confidently provide all the support you need. We work hard on being your reliable partner – every day of the year.

Sincere greetings,

Birgit Harnisch, Sandra Harnisch, Mark Harnisch
Management

QUALITY THAT STANDS THE TEST OF TIME

Just like a suit of armour back in the day, today all Harnisch+Rieth products stand for **robustness, durability and high quality**

Quality in every detail

We are aware of our great responsibility towards our customers. Therefore, for us quality not only means flawless products, but also smooth business processes. It is vital to us to monitor, review and improve all processes, so that we can achieve the best possible results for ourselves and our customers. Quality assurance is a top priority for us. All products are regularly monitored and checked against specifications throughout the entire production process. To maintain lasting customer loyalty, our goal is continuous further development. Each individual employee feels a responsibility for quality, and is therefore actively involved and sharing in the company's success.

Our quality promise in brief:

- All our components come from reputable, certified manufacturers
- Comprehensive incoming goods inspections
- Continuous quality assurance
- 100% made in Germany

PRODUCTION

“Precision in every detail” is in the minds of our qualified employees as they produce superior-quality dental equipment. We build to order, giving us the flexibility to configure equipment for customers. Each unit undergoes strict quality control after assembly to ensure that everything meets our quality standards.

LOGISTICS

Our logistics process encompasses everything from incoming goods through storage to delivery. An optimum process chain is our overriding objective. Our employees are assisted in this aim by ERP software that has been perfectly tailored to our needs.

HEALTH AND SAFETY

We value the best possible health and safety conditions at work. That's why our equipment is carefully designed with ergonomics in mind. What's more, our products feature high-quality filters to prevent any escape of harmful dust or gas. Quality, sound insulation and the resulting quiet running of our motors reduces noise levels in the lab and therefore leads to more focused working.

Fair, sustainable and future-oriented

Made in Germany

“Precision in every detail” is in the minds of our qualified and motivated employees as they produce superior-quality dental equipment day by day. Our equipment is manufactured exclusively at our Winterbach site in Germany. We use components of extremely high quality, to ensure our units perform exactly as they should, day in, day out, even under extreme conditions, making our customers’ work easier.

90% German suppliers

To achieve our mission, we set highly stringent requirements when selecting both our materials and our suppliers, as this is the only way to ensure our customers get only the very best products.

Saying no to plastic

Since 1964, we have been crafting stainless-steel dental equipment by hand to the highest standards here in Winterbach in south-west Germany. By using only proven components, we have created long-lasting equipment with high quality in every respect, whether new or used. Over time, these efforts benefit not only your wallet, but our environment as well.

Long-lasting

We build to order, which allows us a certain flexibility to configure products in line with customers’ wishes. Each unit undergoes strict quality control after assembly to ensure that everything meets our high quality standards. Reliability has a name – Harnisch+Rieth.

Environmentally friendly

Even with the best quality, things can sometimes go awry. If something stops working, we purposely repair equipment instead of discarding it. That’s what our sturdy units are specially designed for.

Workflow warranty

Manufacturer’s warranty – 3-year warranty

All Harnisch+Rieth units come with a statutory 12-month warranty, but we provide an additional 2-year guarantee starting from the verified date of purchase. We also issue a 12-month warranty for spare and wearing parts, as a pledge that these products are free from material, manufacturing and workmanship defects.

If, despite all this, a unit fails to work, you can still be sure that Harnisch+Rieth will find a solution as part of their warranty promise. In a very short time, Harnisch+Rieth will fix your unit in our own in-house repair department.

Warranty +

If you get a maintenance agreement when purchasing a new unit, the warranty of this unit will be extended to 5 years.

Equipment rental service

Harnisch+Rieth are at your side. Our rental equipment service will help you to keep downtimes to a minimum.

Uptime guarantee – Our service partners perform repairs in no time!

Are you in need of fast, on-site support when something goes wrong? Then look no further – our network of certified service partners is on hand. These partners are authorised to provide repairs or service. You can easily find your nearest service partner using our online Service Partner Search Tool.

Availability guarantee – 10-year spare parts warranty

All Harnisch+Rieth products are extremely durable and our spare parts supply service is ready and waiting. We guarantee that we will have genuine spare parts for every unit available for at least 10 years after your purchase.

Added value for more value

START-UP

This package offers you low-cost start-up by an authorised service partner.

To ensure trouble-free working, we regularly remind you of pending maintenance work. If you are unable to carry out maintenance yourself, we will happily provide a service partner to do this, which will be invoiced separately.

Package 01

INSPECTION

This package offers you reliability and peace of mind. You get an annual inspection by our specialists – travel and working time included – to have a regular look at the condition of your equipment. If maintenance or repair is necessary, this will be invoiced separately. If more extensive repairs are needed, you'll get a rental unit at a fixed price.

Package 02

MAINTENANCE

This package includes all maintenance work, including wearing/maintenance parts and a maintenance report. We grant you a discount on spare parts. Genuine H+R parts are exclusively used for maintenance. What's more, in an emergency you get on-site service by an H+R engineer, for no additional charge. You also benefit from an additional 2-year warranty for your H+R unit.

Package 03

If you use professional dental equipment from **Harnisch+Rieth in your work**, then you need to be able to rely on equipment that is completely ready to use, without limitations, at all times.

We are ready: Our Service is at your side throughout the life of your H+R equipment. We or one of our authorised service partners is there for you wherever you need us.

You need a service package that leaves no loose ends. With fast and reliable operative service at your premises. With all the necessary tools, spare and wearing parts. With ideally designed packages for start-up, inspection and maintenance.

In a word: H+R Service. **A service that gives you peace of mind.**

	Package 1	Package 2	Package 3
			
Cut down on the admin The service partner co-ordinates and supervises all the necessary measures and deadlines for maintenance and service. Care and maintenance by our service engineers at set intervals is provided automatically.	✓	✓	✓
Plug and play working Putting your equipment into operation correctly is the basis for a long service life and perfect work results. Our service partners are there to support you.	✓	✓	✓
Reliability Downtimes are dramatically reduced, because trained service engineers inspect and service all your equipment's components and wearing parts at regular intervals throughout the term of the maintenance contract. The early detection of signs of wear and technical defects prevents repairs that you would have to pay for, protects you from avoidable downtimes and guarantees that your equipment will maintain its value for a very long time.		✓	✓
Costs become predictable Depending on which package you decide on, the working hours and travel expenses may be included or invoiced based on the agreed flat rate, and some wearing parts are also included.		✓	✓
Regular inspection Our authorised specialists carry out inspections at regular intervals as per your maintenance schedule. You will therefore be able to regularly keep an eye on the condition of your equipment.		✓	✓
Extended warranty If you get a maintenance agreement when purchasing a new unit, the warranty of this unit will be extended to 5 years.			✓
Professional maintenance for optimum functionality Your equipment is serviced and inspected regularly by trained service engineers using genuine H+R spare parts. In all their service work, our service engineers have access to the knowledge base of every Harnisch+Rieth department.			✓
Cost advantages for spare parts We grant you a discount on spare parts.			✓

Premium service for first-class products

OUR SERVICE PARTNERS

Our network of certified service partners is on hand to perform repairs in no time. These partners are authorised to provide repairs or service. Using our Service Partner Search Tool, you can easily find your nearest service partner at: www.hr-dental.de/en/service-partners/

This keeps you cost effective.

ALL-ROUND REPAIR

Have your unit repaired by Harnisch+Rieth. Even with the best quality, things can sometimes go awry. Whether a product has been in intensive laboratory use for several years and no longer performs at 100% or you unexpectedly have to take advantage of the warranty – you’ve come to the right place.

In a very short time, Harnisch+Rieth will repair your unit in our in-house repair department. We will happily provide you with a rental unit to bridge the gap and minimise your downtimes.

Book a repair easily and conveniently online at www.hr-dental.de/en/repair-service

Why get a product from Harnisch+Rieth?

Here you'll find 11 reasons and advantages that have set us apart for decades. Because we work hard on being your reliable partner – every day of the year.

EASY TO USE

These products are especially easy to handle and make your work more straightforward.

COMPACT

These products have an especially compact design, to save space in your laboratory and give you room to manoeuvre.

QUIET

These products are especially quiet in operation. These units don't need to take centre stage to make your work easier. They ensure smoother, focused working. Powerful but quiet.

PRECISION

These units are especially precise to work with and exceptionally powerful. Harnisch+Rieth stands for quality in every detail – which is the key to perfect results every time.

OPTIMUM WORKFLOW

These products stand for easy working. Practical ergonomics and uncomplicated use make your work more straightforward.

SAVE ON BLASTING MATERIAL

These units lower the cost of blasting material by ensuring an ideal air/sand mixture, making you more cost effective.

POWERFUL SUCTION

What sets these units apart is their very powerful suction, short airflows, effective dust reduction and minimal air turbulence.

DURABILITY

Our product range has already lived up to its reputation in the industry multiple times. In a nutshell: Harnisch+Rieth offers peace of mind.

POWERFUL

These products are extremely powerful and productive in operation and facilitate your everyday work.

ENERGY SAVING

These products are particularly energy saving and therefore make you more cost effective.

HEALTH AND SAFETY

These products offer a very high level of health and safety thanks to a two-stage filter system, reducing the chance of occupational skin and lung diseases caused by fine dust particles in the air.

Blasting technology

Our extensive experience in the construction of sand blasting units, comprehensive laboratory testing, exclusive use of proven components and our robust steel plate design all help us to achieve perfect, high-quality, long-lasting sand blasting units.

Spot blasting unit P-G 400 | Recirculating sand blasting unit D-H 22 S

Automatic blasting unit D-G 16 S / D-G 16 S 2 | Blasting technology consumables and accessories

We are very happy with the P-G 400 spot blasting unit. For many years, it has functioned reliably and been comfortable to work with, and it answers to all the demands of daily dental practice. Due to its precision settings for air pressure and blasting volume, it's also very suitable for scientific studies in which the treatment of surfaces has to be reproducible.

Reinhard Busch, Head of Prosthetics Laboratory, Schleswig-Holstein University Hospital, Kiel Campus

P-G 400

Spot blasting unit

High-end premium spot blasting unit with two to four blasting tanks and vibration mixing chamber system with rapid stopping technology for perfect results without blasting material afterflow.

Durability

Energy saving

Easy to use

Save on blasting material

Optimum workflow

Precision

An extraction socket guarantees direct, fast communication between the extraction unit and the P-G 400

Perfect air-flow routing keeps the work area permanently free from dust and sand

Roomy blasting chamber with optimum lighting

Durable, environmentally friendly, powder-coated steel plate housing

A choice of three languages is available: English, German and French

Water separator with a pre-pressure regulator, manometer and micro-filter

An extraction unit can be connected on the left or right side, as required

CONSISTENT QUALITY AND PRECISION IN EVERY DETAIL

Our P-G 400 spot blasting unit has been designed and built to meet the highest standards in metal and precious metal ceramics and in plastics technology. The robust, steel plate design and exclusive use of proven components ensure a very long service life. The spot blasting unit is modular in design. It can be fitted with two, three or four blasting units. Blasting material of 25µ to 250µ can be used without difficulty (polish blasting material, aluminium oxide and special blasting material).

PRODUCT ADVANTAGES

- ✓ The technology of the P-G 400 enables precise, reliable and comfortable work, as well as using over 90% less blasting material compared to conventional systems, making it extremely cost effective.
- ✓ Set and store various work parameters: blasting material quantity and type, grain size, pressure, blasting time, signal duration, lighting.
- ✓ The set parameters are automatically enabled and displayed when the hand pieces are removed.
- ✓ Work quickly and safely with an optimum air and sand mixture, thanks to the individual settings of the dosing and pressure regulators.
- ✓ An absolutely uniform and reliable flow of blasting material is available at a working pressure of 0.5 bar and over.

PRODUCT HIGHLIGHTS

VIBRATION MIXING CHAMBER SYSTEM

The unique vibration mixing chamber system lowers the cost of blasting material by up to 90% by ensuring an ideal air/sand mixture, making you more cost effective. The vibration mixing chambers are equipped with infinitely variable dosing vibrators and pressure regulators, which control the quantity of blasting material and the blasting pressure. There are 40 programs with different levels of vibration intensity.

RAPID STOPPING TECHNOLOGY

The foot switch controls pneumatic valves that immediately end or trigger the blasting process. This technology offers controlled blasting of delicate objects with pinpoint accuracy, and prevents unwanted re-blasting (meaning less blasting material is used).

AUTOMATIC DETECTION SYSTEM

Removing the desired hand piece from the hand piece holder causes the work parameters (dosing of blasting material quantity, type of blasting material and working pressure) to be shown on the display and automatically enabled. The connected extraction unit starts up and ensures a clear view into the blasting chamber.

PRODUCT DETAILS

CONTROL LOGIC

Clearly arranged controls and indicators ensure straightforward and precise working. The blasting pressure and blasting material supply quantity are set individually for each blasting system and shown on the LED display (type of blasting material, blasting system, grain size, dosing in 10 stages, blasting pressure in increments of 0.1 bar). The sand jet is triggered easily via the foot switch.

AUTOMATIC SWITCH-ON DEVICE

When any function is activated, the lighting and the connected extraction unit are switched on automatically. The unit switches itself off automatically if it is inactive for 15 seconds (this time can be adjusted), and therefore saves a great deal of energy. An extraction unit can be connected on the left or right side, as required.

LEVEL INDICATOR

If the blasting material falls to the reserve level, this is indicated by the relevant signal light on the panel flashing and is visible on the display. At this point, a reserve of blasting material is still available for approx. 10 minutes of blasting.

OUTLET NOZZLE

A practical outlet nozzle for cleaning hands and objects is attached and ready to hand in the blasting chamber.

BLASTING MATERIAL CONTAINER

Fast ventilation for speedy topping up and replacement of blasting material with safe and easy to use clamp lock system, preventing unnecessary jamming due to contamination.

D-H 22 S

Manual blasting unit

The manual blasting unit is the perfect recirculating blasting unit for cost-effective and efficient blasting.

Durability

Powerful

Compact

Easy to use

Save on blasting material

Optimum workflow

Health and safety

ROBUST STEEL PLATE DESIGN WITH A VERY LONG SERVICE LIFE AND HUGE BLASTING POWER

Our D-H 22 S manual blasting unit is ideal for intensive daily manual blasting with minimum maintenance. The manual blasting units are also available without integrated extraction unit.

Roomy blasting chamber with optimum lighting

Durable, environmentally friendly, powder-coated steel plate housing

Perfect air-flow routing keeps the work area permanently free of dust and sand and ensures an optimum view

The sand outlet plug makes it easier to change the blasting material

Pressure display via a manometer

PRODUCT ADVANTAGES

- ✓ The intelligent extraction system reduces blasting material consumption by 70% for cost-effective blasting – only unusable fine dust particles are extracted.
- ✓ Huge blasting power thanks to the injector unit with highly resistant boron carbide blasting nozzle.
- ✓ Very high level of health and safety thanks to a two-stage filter system with dust class H. The super-fine filter with its large area even traps up to 99.98% of micro-dust with a particle size of 0.5µ.

PRODUCT HIGHLIGHTS

BLASTING NOZZLE

The hugely powerful injector with highly resistant boron carbide blasting nozzle ensures problem-free, precise manual blasting and a long service life.

SCREEN TECHNOLOGY

Circulation of the blasting material is automatic and a screen that can be removed from the side keeps it free from investment material residues. The base of the unit contains an intake screen, which additionally purifies the blasting material. The blasting material can be emptied easily via the sand outlet plug.

FILTER TECHNOLOGY

The filter signal light indicates the fill level of the dual filter system and automatically switches the unit off. The filter bag capacity of approx. 10 kg is unique among recirculating sand blasting units. The filter bag can be tightly sealed when the mesh basket is removed, therefore guaranteeing dust-free and simple disposal with access from the side.

PRODUCT DETAILS

INTELLIGENT EXTRACTION SYSTEM

The perfect air-flow routing combined with the highly effective extraction motor guarantees you a continuous and clear view of your work and provides a clean and comfortable working environment. The unit's suction power is also intelligently controlled as it adapts itself to the preset power, depending on the level in the filter. This ensures constant power, regardless of the filter fill level. In addition, the extraction motor features regulated, automatic control with a run-on time of 7 seconds.

CONTROL LOGIC

Using the pressure regulator, you can set the working pressure to the desired value and adapt it to your requirements. The installed manometer indicates the set working pressure. The sand jet is triggered easily via the foot switch.

D-G 16 S / D-G 16 S 2

Automatic sand blasting unit

The automatic sand blasting unit D-G 16 is the perfect recirculating blasting unit for cost-effective blasting. It can be used in automatic, manual or dual mode.

-  Powerful
-  Durability
-  Easy to use
-  Save on blasting material
-  Optimum workflow
-  Health and safety

Pressure display via a manometer

Roomy blasting chamber with optimum LED lighting

Perfect air-flow routing keeps the work area permanently free of dust and sand and ensures an optimum view

Intuitive control logic

The important blasting parameters of pressure and time are precisely coordinated

Durable, environmentally friendly, powder-coated steel plate housing

The sand outlet plug makes it easier to change the blasting material

ROBUST STEEL PLATE DESIGN WITH A VERY LONG SERVICE LIFE

Our automatic sand blasting unit D-G 16 is indispensable for ensuring cost effectiveness in blasting technology. This high-performance unit can be used either in automatic mode or as a manual blasting unit, with minimal maintenance. The automatic blasting units are also available without integrated extraction unit.

PRODUCT ADVANTAGES

- ✓ The intelligent extraction system reduces blasting material consumption by 70% for cost-effective blasting – only unusable fine dust particles are extracted.
- ✓ Up to ten cast objects can be blasted simultaneously in the sand blasting basket.
- ✓ The important blasting parameters of pressure and time are precisely coordinated.
- ✓ Removable injector for large freedom of movement.
- ✓ Very high level of health and safety thanks to a two-stage filter system with dust class H. The super-fine filter with its large area even traps up to 99.98% of micro-dust with a particle size of 0.5µ.

PRODUCT HIGHLIGHTS

BLASTING UNIT

For manual blasting, the highly resistant boron carbide blasting nozzle with huge blasting power can be removed from the holder. The blasting process is initiated using the foot switch. In the S2 version, dual mode can be used for blasting.

SAND BLASTING BASKET

Rotates with a special geometry. Up to ten model castings can be blasted simultaneously. A rubber inlay in the basket protects the objects and the basket. On average, an object is blasted fully automatically in just 9 minutes.

SCREEN TECHNOLOGY

Circulation of the blasting material is automatic and a screen that can be removed from the side keeps it free from investment material residues. The base of the unit contains an intake screen, which additionally purifies the blasting material. The blasting material can be emptied easily via the sand outlet plug.

FILTER TECHNOLOGY

The filter signal light indicates the fill level of the two-stage filter system and automatically switches the unit off. The filter bags can be tightly sealed when the mesh basket is removed, ensuring dust-free and simple disposal. The filter bag capacity of approx. 10 kg is unique among recirculating sand blasting units.

Consumables and accessories

Super-fine filter

Fine dust particles in the air are especially dangerous. Damaging effects on skin and respiratory organs have also been found with dental plaster, investment materials and non-classified mixed dust that reached the general dust threshold. For this reason, all Harnisch+Rieth extraction units and blasting units with integrated extraction unit are equipped with super-fine filter cassettes or cartridges.

PRODUCT ADVANTAGES

- ✓ Maximum health and safety protection.
- ✓ Up to 99.98% of micro-dust particles with a grain size of 0.5µ are filtered.

Art. no.	Dust class	D-H 22 S	D-G 16 S, S2
42204	H	✓	✓

Filter bags

All filter bags offered by Harnisch+Rieth are made of the highest quality materials. Extensive quality controls ensure consistently high quality, which is the prerequisite for good functionality and perfect extraction results.

PRODUCT ADVANTAGES

- ✓ Optimum closure system.
- ✓ Capacity of up to 10 kg.
- ✓ The practical mesh basket improves the degree of filling, stabilises the suction power and ensures easy and dust-free disposal.

42303	✓	Fleece	M	Approx. 10 kg

Blasting material

The blasting material supplied is of the highest quality. Extensive quality controls and multiple special screens in the filling system developed in-house ensure consistently high quality, which is the prerequisite for good functionality and perfect blasting results. To maintain this high quality, Harnisch+Rieth blasting material is transported and stored in plastic canisters, preventing moisture from penetrating. The 6 kg bottles with handles and practical filler necks are really easy to handle.

SPECIAL ALUMINIUM OXIDE AL2O3

Blasting material of **99.50%** anti-magnetic alpha-aluminium oxide with very high hardness. The blasting material retains its sharp edges until it is worn. Our blasting material undergoes a special screening process, giving it a very high purity.

POLISH BLASTING MATERIAL

Non-abrasive glass beads for smoothing and compressing the surface. For polishing and smoothing precious metal and non-precious metal alloys and devesting inlays and pressed ceramic without removing material. Also for removing plaster residues and tartar. Our blasting material undergoes a special screening process, giving it a very high purity.

PRODUCT ADVANTAGES

- ✓ High-quality material with a very high purity.
- ✓ Multiple special screening process in the filling system developed in-house.
- ✓ Extensive quality controls ensure consistently high quality.

Extraction units
D-LE 255 S, D-LE 255 SB

We recommend our D-LE 255 S/SB single-place extraction units, which promise high suction power with maximum filter effectiveness, a dust collection capacity of approx. 10 kg and very quiet operation due to their optimum noise insulation. You can find more information on page 36 ff.

Blasting nozzles

By combining blasting material, blasting nozzles and sophisticated blasting technology from Harnisch+Rieth, you can be assured of quality, durability and speed during your blasting work. All our blasting nozzles are of the highest quality. Extensive quality controls ensure consistently high quality, which is the prerequisite for excellent functionality and perfect blasting results.

Extraction technology

Our range of models ensures you have the best possible unit for every type of use. It features extraction units with huge suction power, low noise levels and maximum filter effectiveness.

Single-place extraction unit D-LE 255 S/SB | CAM extraction unit D-LE 255 S/CAM SB/CAM

Two-place extraction unit D-LE 255 SD/SDB | Extraction technology consumables and accessories

The notable quality, endurance and precise functionality of Harnisch+Rieth equipment provide great support in my daily lab work.

Master dental technician and senior partner Jan Langner, Schwäbisch Gmünd

D-LE 255 S/SB

Single-place extraction unit

Extraction units for a single workplace, with huge suction power, low noise levels and highly effective filtration.

Durability

Compact

Easy to use

Health and safety

Quiet

Powerful suction

Energy saving

Intuitive and user-friendly operation with a large, clearly arranged multifunctional LED display

Optimum noise insulation for especially smooth running

Integrated castors make it very easy to move

Durable, environmentally friendly, powder-coated steel plate housing

SUPERIOR EXTRACTION RESULTS WITH ULTIMATE PROTECTION FROM FINE DUST.

Our range of models ensures you have the best possible unit for every type of use. The D-LE 255 S/SB single-place extraction unit is the equipment of choice for dust-generating equipment such as blasting units, saws and dental model grinders. Infinitely variable suction power can be selected via a regulator and maintained at a constant level by the automatic air-flow regulation. When the filter bag reaches the maximum fill level, the filter signal light comes on and the unit switches off automatically. High suction power from industrial high-pressure fan motors in various versions, highly effective filtration and optimum noise insulation make these units stand out from the crowd.

PRODUCT ADVANTAGES

- ✓ Automatic air-flow regulation ensures constant suction power regardless of the filter fill level.
- ✓ Automatic and intelligent communication when connected to a dust-generating device as the power source.
- ✓ Effective dust reduction thanks to a high flow rate of approx. 4000 l/min. with low power consumption.
- ✓ Two-stage, dust class M filter system ensures a very high level of health and safety.

PRODUCT HIGHLIGHTS

FLOW RATE CONTROL DEVICE

The air-flow rate is regulated automatically. The air-flow rate through the suction funnel remains constant, irrespective of the degree of soiling of the filter material. At specified time intervals, the extraction unit carries out a self-test, during which the air ducts are sucked clear. The air-flow rate can be adjusted for the type of collection device (suction muzzle), and its flow rate indicated on the display. The flow rate control device monitors not only the air-flow rate, but also the degree of soiling of the pre-filter and super-fine filter. The condition of the filter components and a reduction in the extracted air-flow rate through the collection device (suction muzzle) to below the prescribed threshold are indicated visually and acoustically. If the air-flow rate falls below the limit, all dust-generating devices connected to the extraction unit are switched off.

FILTER TECHNOLOGY

All the extraction units in our D-LE 255 model range are equipped with a two-stage filter system. The dust is collected in a large, two-ply filter bag with a capacity of up to 10 kg, trapped in a mesh basket and stabilised, which improves the maximum achievable fill level and optimises the unit's suction power. The filter bags can be tightly sealed when the mesh basket is removed, ensuring dust-free and simple disposal. The large-area, super-fine filter, which is downstream from

the filter bag, traps 99.98% of even micro-dust with a particle size of 0.5µ, offering additional health protection. The condition of the filter components and a reduction in the extracted air-flow rate through the suction funnel are indicated visually and acoustically.

PRODUCT DETAILS

HIGH ENERGY EFFICIENCY

Our extraction units achieve their high energy efficiency by very high suction combined with low power consumption. All units from the D-LE series are designed with exceptionally short air flows with minimal turbulence. The flow rate control device regulates the suction power with considerably less energy use and provides the user with an extraction system that is high-powered yet has low running costs.

MOTOR TECHNOLOGY

Harnisch+Rieth offer different versions to suit the running times and size of your devices. We recommend the D-LE 255 S with brushed motor for smaller devices, and the D-LE 255 SB with brushless motor for larger devices with long work intervals. The motor additionally has sound insulation, making the unit more comfortable to work with. Both extraction units guarantee extremely strong suction and render your laboratory a quiet and clean environment with high standards of health and safety.

OPERATING MODE

For the D-LE 255 S/SB series, the extraction parameters can be set as described below.

Continuous mode - In continuous mode, the extraction unit runs as soon as it is switched on, regardless of whether any dust-generating devices are connected. The suction power can be infinitely adjusted via potentiometers on the

operating panel. This means that the air-flow rate (l/s) is regulated automatically and always remains constant in the suction funnel, irrespective of the degree of soiling of the filter material. When the dust-generating device provides a power source for the extraction unit, the unit benefits from quick-fire automatic switch-on. That's why we recommend the P-G 400 spot blasting unit.

TECHNICAL DATA

Width	420 mm
Depth	370 mm
Height	543 mm
Electrical connection	220-240 V/50 Hz
Fuse	2x 16 A/T main fuse
Power consumption	Max. 1,100 (fan power)
Air throughput	Max. 55 l/sec.
Sound pressure level	52 dB(A) with minimum suction 64 dB(A) with maximum suction

Max. flow rate	3,900 l/min. (234 m³/h)
Super-fine filter	Dust class M, DIN EN 60335-2-69

D-LE 255 SD / SDB

Two-place extraction unit

Durability

Compact

Easy to use

Health and safety

Quiet

Powerful suction

Energy saving

The ideal extraction units for two workplaces, with huge suction power, low noise levels and maximum filtration.

Available with brushed or brushless motor

Intuitive and user-friendly operation with a large, clearly arranged multifunctional LED display

Optimum noise insulation for especially smooth running

Integrated castors make it very easy to move

Durable, environmentally friendly, powder-coated steel plate housing

SUPERIOR EXTRACTION RESULTS WITH ULTIMATE PROTECTION FROM FINE DUST.

Our range of models ensures you have the best possible unit for every type of use. The D-LE 255 SD/SDB two-place extraction units promise the optimum unit for every type of use. These extraction units are designed for one or two extraction points, with automatic switch-on device and state-of-the-art electronic air-flow rate regulation. As such, they are ideal for use at preparatory workplaces, but also for extraction for blasting units, saws, dental model grinders and other dust-generating devices. When the filter bag reaches the maximum fill level, the filter signal light comes on and the unit switches off automatically. High suction power from industrial high-pressure fan motors, highly effective filtration and optimum noise insulation make sure these units stand out from the crowd.

PRODUCT ADVANTAGES

- ✓ Automatic air-flow regulation ensures constant suction power regardless of the filter fill level.
- ✓ Automatic and intelligent automatic switch-on device for a maximum of two dust-generating devices.
- ✓ Effective dust reduction thanks to a high flow rate of approx. 4000 l/min. with low power consumption.
- ✓ Two-stage, dust class M filter system ensures a very high level of health and safety.

PRODUCT HIGHLIGHTS

FLOW RATE CONTROL DEVICE

The air-flow rate is regulated automatically. The air-flow rate through the suction funnel remains constant, irrespective of the degree of soiling of the filter material. At specified time intervals, the extraction unit carries out a self-test, during which the air ducts are sucked clear. The air-flow rate can be adjusted for the type of collection device (suction muzzle), and its flow rate indicated on the display. The flow rate control device monitors not only the air-flow rate, but also the degree of soiling of the pre-filter and super-fine filter. The condition of the filter components and a reduction in the extracted air-flow rate through the collection device (suction muzzle) to below the prescribed threshold are indicated visually and acoustically. If the air-flow rate falls below the limit, all dust-generating devices connected to the extraction unit are switched off.

FILTER TECHNOLOGY

All the extraction units in our D-LE 255 model range are equipped with a two-stage filter system. The dust is collected in a large, two-ply filter bag with a capacity of up to 10 kg, trapped in a mesh basket and stabilised, which improves the maximum achievable fill level and optimises the unit's suction power. The filter bags can be tightly sealed when the mesh basket is removed, ensuring dust-free and simple disposal. The large-area, super-fine filter, which is downstream from

the filter bag, traps 99.98% of even micro-dust with a particle size of 0.5µ, offering additional health protection. The condition of the filter components and a reduction in the extracted air-flow rate through the suction funnel are indicated visually and acoustically.

PRODUCT DETAILS

HIGH ENERGY EFFICIENCY

Our extraction units achieve their high energy efficiency by very high suction combined with low power consumption. All units from the D-LE series are designed with exceptionally short air flows with minimal turbulence. The flow rate control device regulates the suction power with considerably less energy use and provides the user with an extraction system that is high-powered yet has low running costs.

MOTOR TECHNOLOGY

Harnisch+Rieth offer different versions to suit the running times and size of your devices. We recommend the D-LE 255 SD with brushed motor for smaller devices, and the D-LE 255 SDB with brushless motor for larger devices with long work intervals. The motor additionally has sound insulation, making the unit more comfortable to work with. Both extraction units guarantee extremely strong suction and render your laboratory a quiet and clean environment with high standards of health and safety.

OPERATING MODE

For the D-LE 255 SD/SDB series, the extraction parameters can be set as described below.

Continuous mode - In continuous mode, the extraction unit runs as soon as it is switched on, regardless of whether any dust-generating devices are connected. The suction power can be infinitely adjusted via potentiometers on the operating panel.

Automatic mode - In automatic mode, the extraction unit only starts when a connected electrical device is switched on or operated. All commercially available hand pieces or dust-generating devices can be connected. In both operating modes, different types of control (l/s or m/s) can be set. The air-flow rate is regulated automatically and is always constant, regardless of the degree of soiling of the filter material.

D-LE 255 S/CAM SB/CAM

CAM extraction unit

Extraction units for CAM machines, with huge suction power, low noise levels and maximum filtration.

SUPERIOR EXTRACTION RESULTS WITH ULTIMATE PROTECTION FROM FINE DUST.

These extraction units feature a powerful, noise-insulated high-pressure fan and also automatic air-flow regulation, automatic switch-on and switch-off and filter change indicator. The D-LE 255/CAM series has the option of computer numerical control (CNC machine) for adjusting the set air-flow rate, and is primarily used for the extraction of dust, metal dust, mineral dust, plastic dust, plaster dust, oxide ceramic and other ceramic dust.

PRODUCT ADVANTAGES

- ✓ Automatic and intelligent bidirectional communication with your CAM unit.
- ✓ Automatic air-flow regulation ensures constant suction power regardless of the filter fill level.
- ✓ Effective dust reduction thanks to a high flow rate of approx. 4000 l/min. with low power consumption.
- ✓ Two-stage, dust class M filter system ensures a very high level of health and safety.

PRODUCT HIGHLIGHTS

FLOW RATE CONTROL DEVICE

The air-flow rate is regulated automatically. The air-flow rate through the suction funnel remains constant, irrespective of the degree of soiling of the filter material. At specified time intervals, the extraction unit carries out a self-test, during which the air ducts are sucked clear. The air-flow rate can be adjusted for the type of collection device (suction muzzle), and its flow rate indicated on the display. The flow rate control device monitors not only the air-flow rate, but also the degree of soiling of the pre-filter and super-fine filter. The condition of the filter components and a reduction in the extracted air-flow rate through the collection device (suction muzzle) to below the prescribed threshold are indicated visually and acoustically. If the air-flow rate falls below the limit, all dust-generating devices connected to the extraction unit are switched off.

FILTER TECHNOLOGY

All the extraction units in our D-LE 255 model range are equipped with a two-stage filter system. The dust is collected in a large, two-ply filter bag with a capacity of up to 10 kg, trapped in a mesh basket and stabilised, which improves the maximum achievable fill level and optimises the unit's suction power. The filter bags can be tightly sealed when the mesh basket is removed, ensuring dust-free and simple disposal. The large-area, super-fine filter, which is downstream from

the filter bag, traps 99.98% of even micro-dust with a particle size of 0.5µ, offering additional health protection. The condition of the filter components and a reduction in the extracted air-flow rate through the suction funnel are indicated visually and acoustically.

BIDIRECTIONAL COMMUNICATION – SIMPLY CONNECT AND START EXTRACTION

The interface offers intelligent bidirectional communication with your CAM unit. It allows signals to be processed and the necessary action to be initiated, e.g. switching on and off, monitoring the filter status and functional status of extraction.

Extraction continues working even when the filter is full, until the ongoing production step in the CNC machine is complete. The extraction unit signals the filter status to the CNC machine and prevents another program from being started.

PRODUCT DETAILS

HIGH ENERGY EFFICIENCY

Our extraction units achieve their high energy efficiency by very high suction combined with low power consumption. All units from the D-LE series are designed with exceptionally short air flows with minimal turbulence. The flow rate control device regulates the suction power with considerably less energy use and provides the user with an extraction system that is high-powered yet has low running costs.

MOTOR TECHNOLOGY

Harnisch+Rieth offer two different versions to suit the running times and size of your milling machines. We recommend the D-LE 255 S/CAM with brushed motor for smaller milling machines and the D-LE 255 SB/CAM with brushless motor for larger milling machines with long work intervals. The motor additionally has sound insulation, making the unit more comfortable to work with. Both extraction units guarantee extremely strong suction and render your laboratory a quiet and clean environment with high standards of health and safety.

OPERATING MODE

For the D-LE 255 CAM series, the extraction parameters can be set as described below.

Automatic mode - The suction power can be set and regulated in increments in both units of measurement, “flow rate” (l/s) and “air speed” (m/s). The air-flow rate is regulated automatically and is always constant through the suction funnel, regardless of the degree of soiling of the filter material.

Consumables and accessories

Super-fine filter

Fine dust particles in the air are especially dangerous. Damaging effects on skin and respiratory organs have also been found with dental plaster, investment materials and non-classified mixed dust that reached the general dust threshold. For this reason, all Harnisch+Rieth extraction units and blasting units with integrated extraction unit are equipped with super-fine filter cassettes or cartridges.

PRODUCT ADVANTAGES

- ✓ Maximum health and safety protection.
- ✓ Up to 99.98% of micro-dust particles with a grain size of 0.5µ are filtered.

Steam blasting technology

Our range of models ensures you have the best possible unit for every type of use: mobile, with tank, or tank with permanent water connection. All steam blasting units are equipped with identical heating elements and are ready to use in just **4 minutes**.

Compact, powerful and productive.

Steam blasting unit A-S 80 | Steam blasting unit D-S 100 | Steam blasting unit D-S 100 A
"Kalk free" filter system | Steam blasting technology consumables and accessories

We've been working with equipment from the Harnisch+Rieth company every day for decades. The quality of the equipment and the excellent service are truly unique. For me, no other manufacturer in the market can compare.

Master dental technician Nico Riester, Hechinger Zahntechnik Riester GmbH, Hechingen

A-S 80

Mobile steam blasting unit

The compact and reliable steam blasting unit for all cleaning applications using dry steam.

YOU DON'T HAVE TO BE GREAT IN SIZE TO ACHIEVE GREAT THINGS.

Our new A-S 80 steam blasting unit achieves the highest level of quality and reliability. The steam blasting unit is supplied with water from an external container and has a large, rapidly heated boiler capacity of 2.3 l. It is ideal for rapid and thorough cleaning of instruments, and for the complete removal of wax, grease, paste, oil, chips, adhesive and other residues.

PRODUCT ADVANTAGES

- ✓ Portable and ideal for use in tight spaces.
- ✓ Can be wall-mounted.
- ✓ Extremely quick heating time due to a powerful heating system. The steam blasting unit is ready to use after just **4-5** minutes.
- ✓ A high and constant steam pressure of 5 bar guarantees that the steam temperature remains steady at 160 °C.
- ✓ Intelligent pump control to avoid interruptions to your work.

PRODUCT HIGHLIGHTS

CONTROL SYSTEM

The unit is equipped with an all-electronic control system that automatically and constantly monitors and regulates the temperature, pressure and water level. The high-performance pressure switch provided keeps the steam pressure constant. The unit features a pressure relief valve that automatically relieves excessive steam pressure at 8.5 bar.

HEATING ELEMENT

The steam is generated by a powerful spiral element in an insulated stainless-steel boiler. The steam pressure and temperature are continuously monitored by overpressure and temperature protection devices with automatic cut-out.

PRODUCT DETAILS

CONTROL LOGIC

The boiler is filled by a robust high-pressure pump with thermal cut-out. Steam blasting is performed with the hand piece, which is fitted with a fine nozzle. The dry steam with very low moisture content is constantly at 160 °C. After use, the hand piece is placed back in the holder attached to the housing. The drain cock is used for cleaning the boiler, so that limescale is easily removed.

HAND PIECE

The ergonomically designed and easy-to-hold hand piece is made of special, heat insulating, solid plastic. The thermal steam hose connected to the hand piece is extremely flexible and has a textile protective sleeve.

D-S 100

Steam blasting unit

The powerful and reliable steam blasting unit for all tank-operated cleaning applications.

TRUE GREATNESS COMES FROM WITHIN.

Our D-S 100 steam blasting unit achieves the highest level of quality and reliability. It is ideal for rapid and thorough cleaning of instruments, and for the complete removal of wax, grease, paste, oil, chips, adhesive and other residues. The steam blasting unit includes a water tank with manual filling.

PRODUCT ADVANTAGES

- ✓ Total capacity of 7.3 l for long-lasting use.
- ✓ The pressureless water tank can also be refilled during operation, and prevents time-consuming lowering of the boiler pressure.
- ✓ Intelligent pump control to avoid interruptions to your work.
- ✓ Extremely quick heating time due to a powerful heating system. The steam blasting unit is ready to use after just **4-5** minutes.
- ✓ A high and constant steam pressure of 5 bar guarantees that the steam temperature remains steady at 160 °C.

PRODUCT HIGHLIGHTS

CONTROL SYSTEM

The unit is equipped with an all-electronic control system that automatically and constantly monitors and regulates the temperature, pressure and water level. The high-performance pressure switch provided keeps the steam pressure constant. The unit features a pressure relief valve that automatically relieves excessive steam pressure at 8.5 bar.

HEATING ELEMENT

The steam is generated by a powerful spiral element in an insulated stainless-steel boiler. The steam pressure and temperature are continuously monitored by overpressure and temperature protection devices with automatic cut-out.

PRODUCT DETAILS

CONTROL LOGIC

The boiler is filled by a robust high-pressure pump with thermal cut-out. Steam blasting is performed with the hand piece, which is fitted with a fine nozzle. A choice of dry or wet steam can be used for blasting. Water is supplied manually via the water tank, which indicates the water level acoustically and visually. The signal persists until the water tank is refilled. The drain cock is used for cleaning the boiler, so that limescale is easily removed.

SAFETY

The unit is equipped with an electronic descaling system to prevent limescale deposits and the accumulation of limescale residues. Any deposits that do occur are easily removed using the integrated flushing mode. What's more, in the event of a leak the water monitor stops the water supply immediately, switches the unit off and therefore prevents potential water damage.

HAND PIECE

After use, the hand piece is placed back in the holder, which is attached to the spray guard or the housing. The ergonomically designed and easy-to-hold hand piece is made of special, heat insulating, solid plastic. The thermal steam hose connected to the hand piece is extremely flexible and has a textile protective sleeve.

TECHNICAL DATA

Width	325 mm	Water supply tank	5 l with manual filling during operation
Depth	305 mm	Safety valve	Opens at 7 bar
Height	540 mm	Operating pressure	5 bar
Electrical connection	220 V; 50 Hz	Temperature limiter	170 °C

D-S 100 A

Steam blasting unit

The powerful and reliable steam blasting unit for all cleaning applications with permanent water connection.

When using wet steam, the water content can be adjusted via an infinitely variable valve

Indication and monitoring of operating states

Selection button for wet and dry steam

Steam blasting is activated by the practical foot switch

Durable, environmentally friendly, powder-coated stainless-steel housing

A large, clear manometer indicates the boiler pressure at any given time

Easy to use

Durability

Powerful

Optimum workflow

Energy saving

HIGH-END STEAM BLASTING UNIT DESIGNED FOR CONTINUOUS USE

Our D-S 100 A steam blasting unit achieves the highest level of quality and reliability. It is ideal for rapid and thorough cleaning of instruments, and for the complete removal of wax, grease, paste, oil, chips, adhesive and other residues. The steam blasting unit has a permanent water connection and can also be refilled manually at any time.

PRODUCT ADVANTAGES

- ✓ Automatic water refilling via a permanent water connection.
- ✓ The pressureless water tank (5.0 l) can also be refilled during operation, and prevents time-consuming lowering of the boiler pressure.
- ✓ You can choose to have the water supplied from a tank or a permanent water connection.
- ✓ Intelligent pump control to avoid interruptions to your work.
- ✓ Extremely quick heating time due to a powerful heating system. The steam blasting unit is ready to use after just **4-5** minutes.
- ✓ A high and constant steam pressure of 5 bar guarantees that the steam temperature remains steady at 160 °C.

PRODUCT HIGHLIGHTS

CONTROL SYSTEM

The unit is equipped with an all-electronic control system that automatically and constantly monitors and regulates the temperature, pressure and water level. The high-performance pressure switch provided keeps the steam pressure constant. The unit features a pressure relief valve that automatically relieves excessive steam pressure at 8.5 bar.

HEATING ELEMENT

The steam is generated by a powerful spiral element in an insulated stainless-steel boiler. The steam pressure and temperature are continuously monitored by overpressure and temperature protection devices with automatic cut-out.

PRODUCT DETAILS

CONTROL LOGIC

The boiler is filled by a robust high-pressure pump with thermal cut-out. Steam blasting is performed with the hand piece, which is fitted with a fine nozzle. A choice of dry or wet steam can be used for blasting. Water is supplied either from an external water supply main or manually via the water tank, which indicates the water level acoustically and visually. The signal persists until the water tank is refilled. The drain cock is used for cleaning the boiler (desludging).

SAFETY

The unit is equipped with an electronic descaling system to prevent limescale deposits and the accumulation of limescale residues. Any deposits that do occur are easily removed using the integrated flushing mode. What's more, in the event of a leak the water monitor stops the water supply immediately, switches the unit off and therefore prevents potential water damage.

HAND PIECE

After use, the hand piece is placed back in the holder, which is attached to the spray guard or the housing. The ergonomically designed and easy-to-hold hand piece is made of special, heat insulating, solid plastic. The thermal steam hose connected to the hand piece is extremely flexible and has a textile protective sleeve.

EMPFEHLUNG

For applications without a descaling system we recommend our “Kalk free” filter system. This combines outstanding efficiency with simple installation. Our filter system doesn’t need a power connection and reliably prevents the build-up of limescale. This saves energy, extends maintenance intervals and prevents your unit from premature ageing. Further information can be found on page 62.

SERVICE LIFE

To reduce maintenance and extend service intervals when mains water is used, we promise an extended service life when our “Kalk free” filter system (page 62) is used, and guarantee a reliable supply of clean, lime-free water.

“Kalk free” filter system

Steam blasting accessory D-S 100 A and for any manufacturer

The Harnisch+Rieth filter system satisfies the exacting requirements of critical applications and can help to reduce costs.

Filter system for wall mounting

The filter head features valve technology that allows the candles to be replaced without turning off the water supply. A flush valve is also incorporated.

Simple installation with standard plumbing connections.

All filter candles fit in the filter head, making it easy to switch to a larger candle without any problems.

The wall fastener allows the filter head to be mounted on the wall with ease.

Durability

Easy to use

Compact

Optimum workflow

DURABILITY AND QUALITY FOR ALL STEAM BLASTING UNITS WITH PERMANENT WATER CONNECTION.

The Harnisch+Rieth filter cartridge system sets a new benchmark. It has been specially designed for our units and the kind of work they do. The unique water filter system combines sophisticated filter technology with intelligent engineering that could previously only be achieved in larger and more expensive installations. To a large extent, the efficiency of steam blasting units, disinfectant cleaners and wax extraction units, the level of safety when using sterilisers and the reliability of commercial equipment all depend on the water quality and hence also on the water treatment technology.

PRODUCT ADVANTAGES

- ✓ Optimised price/performance ratio
- ✓ Low investment and maintenance costs
- ✓ Units are reliably supplied with pure (lime-free) water
- ✓ Excellent cleaning and disinfection results
- ✓ Save on the cost of repairing damage caused by lime
- ✓ Easy to use

PRODUCT HIGHLIGHTS

FLOWMETER

The flowmeter measures the water flow rate and indicates pending filter replacement optically and acoustically.

- Programmable water hardness
- Visual and acoustic filter replacement warning
- Clear OLED display and intuitive menu-led navigation
- Battery operation up to 5 years, or via mains connection
- Attachment for mounting on the filter head, or wall mounting

PRODUCT DETAILS

INSTALLATION, MAINTENANCE AND REPLACEMENT

Harnisch+Rieth’s filter cartridge system is modular in design. It consists of a head and filter candle with different configurations and treatment capacity levels. This system family has been designed for use in laboratories, medical centres and various commercial enterprises. Thanks to its compact dimensions and unique multi-valve connection head, the system can be installed and operated almost anywhere, in a vertical position, either as a free-standing unit or mounted on a wall.

- Replace cartridges in the network in a matter of seconds: unscrew, screw in, finished!
- Bleed and flush directly at the filter head with no need to disconnect hoses
- Automatic inlet and outlet check valves for safe cartridge replacement
- Pressure relief valves are automatically actuated during cartridge replacement
- All seals between the head and cartridge are replaced when a new cartridge is fitted
- Streamlined connection allows replacement in a tight space

TECHNICAL DATA

Consumables and accessories

Descaling agent

Our descaling agent is specially designed for our units and the kind of work they do. When used correctly, it keeps our units functioning reliably and ensures their longevity.

- Ratio 1:10, i.e. add 250 ml descaling agent to 2,500 ml water.
- The exposure time depends on the degree of scaling. If there is a lot of limescale, the exposure time will be 8 hours minimum.

Article no.	Type
15271	1000 ml

Spray guard

A spray guard system made from stainless-steel and acrylic glass keeps the workplace clean. After use, the steam blasting hand piece is simply replaced in the holder. The acrylic glass is easily removed from the collection tray for easy cleaning.

Model making

Our range of models ensures you have the best possible unit for every type of use. For stirring, mixing or grinding.

Plaster model belt grinder D-BS 320 | Vacuum mixer D-VM 18
Dental model grinder G-F 318 | Model making consumables and accessories

The notable quality, endurance and precise functionality of Harnisch+Rieth equipment provide great support in my daily lab work.
Master dental technician and senior partner Jan Langner, Schwäbisch Gmünd

D-BS 320

Plaster model belt grinding unit

An extremely powerful motor ensures optimum, effortless removal of even the hardest plaster.

Detachable housing front also allows fast and easy care with no need for tools

Guard panel for protection from plaster shavings

Grinding belt with grain size 50 included in delivery

Durable, environmentally friendly, powder-coated steel plate housing

Health and safety

Easy to use

Durability

Powerful

TECHNICALLY SOPHISTICATED AND OF THE HIGHEST QUALITY.

Our D-BS 320 belt grinder is specially designed for the dry grinding of denture models. It enables all the materials found in the lab, from super-hard plaster and investment materials to Plexiglas, to be processed effortlessly and efficiently. Grinding without water retains the maximum quality and accuracy of the model produced by the dental technician.

PRODUCT ADVANTAGES

- ✓ Extra-large work cut-out of 10 x 10 cm for working on large models.
- ✓ Suitable for every model and situation, thanks to the infinitely adjustable workpiece table (+15 °C to -15 °C).
- ✓ Optimally designed, quiet running with superior noise insulation for clean and precise working.
- ✓ Detachable housing front allows rapid belt changes with no need for tools.

PRODUCT HIGHLIGHTS

CLEANING

The optimum design of the belt guide combines with an ingeniously arranged rotating brush roller to clean the grinding belt continuously, so that clogging is impossible, even with wet plaster. The robust and solid design guarantees a very long service life.

PRODUCT DETAILS

SPECIAL GRINDING BELT

The grinding belt can be changed quickly and easily with minimum effort and adjusted using the belt tensioning device. The low-price grinding belts are available with various grain sizes and enable perfectly clean and even grinding results.

FILTER SYSTEM

The external, highly effective filter system with large-area super-fine filter guarantees a completely dust-free and comfortable working environment. The grinding dust is collected in a disposable paper filter bag, held in a mesh basket. The large-area, super-fine filter, which is downstream from the filter bag, traps 99.98% of even micro-dust with a particle size of 0.5μ, offering optimum health protection. When the maximum filling quantity (approximately 20 kg) is reached, the belt grinder switches off automatically. The filter bag can then be taken to the disposal point in the mesh basket, easily and without dust.

D-VM 18

Vacuum mixer

The perfect, bubble-free mixing results of this powerful and robust vacuum mixer cannot fail to impress.

Durability

Easy to use

Powerful

Optimum workflow

FOR THE MOST STRINGENT QUALITY REQUIREMENTS

With our D-VM 18, you can reliably stir a huge variety of plaster, investment materials, silicones and alginates. The unit's ease of use and extreme sturdiness simplify your work. The user interface allows you to set the relevant parameters quickly and easily. The vacuum mixer is supplied with a robust, coated 300 ml mixing cup. The stainless-steel agitators with solid metal cover are also designed for many years of use, preventing expensive lifecycle costs and therefore protecting the environment.

PRODUCT ADVANTAGES

- ✓ Maintenance-free, high-performance double-piston vacuum pump ensures vacuum is achieved rapidly without a compressed-air connection (max. 980 mbar).
- ✓ Large volumes can be reliably processed thanks to the high torque (0-600 rpm) and clockwise/anti-clockwise rotation.
- ✓ Reducing boiling/bubbling effect by incremental vacuum adjustment from 0% to 100%.
- ✓ Integrated, easily replaceable triple filter system with automatic filter test program.
- ✓ 15 individual agitation programs, 50 programmable memory locations and a manual setting.
- ✓ Various cup sizes available.

PRODUCT HIGHLIGHTS

PROGRAMMING

The vacuum mixer features two different types of operating program. The manual program, or manual mode, and the automated sequence (manual and user mode). It is also possible to use individual functions in manual mode, e.g. stirring only (mix button) or generating vacuum only (vac button). The agitation programs can be selected effortlessly using the buttons on the operating panel. As well as the agitation time, direction of rotation and speed, you can also individually set the vacuum. 15 programmable stirring functions can be set. Up to 50 programs can be individually named and retrieved as needed.

PUMP AND MOTOR

The heart of these units is the powerful, robust geared agitation motor and the maintenance-free high-powered double-piston vacuum pump, which quickly generates a vacuum of 970 mbar. An overload protection switch protects the agitation motor from overload.

PRODUCT DETAILS

CONTROL LOGIC

The filled agitator cup is automatically coupled to the agitator drive by a pneumatically assisted lifting device and pressed onto the sealing surface. The previously selected agitation program is initiated via the start button. The maintenance-free, high-powered double-vacuum pump quickly reaches a vacuum pressure of 980 mbar, as suitable for the selected program. When the mixing process is complete, a brief acoustic signal sounds and the agitator switches off. The vacuum pump continues to operate until the stop button is pressed, which also initiates the metered, speedy flooding of the mixing cup.

LIFTING PLATFORM

The lifting platform holds and guides the mixing cup. As it rises, the agitator coupling parts are automatically guided into each other and connected. At the same time, the mixing cup is pressed onto the sealing surfaces and held, even without vacuum. The work sequence can be run automatically or manually.

FILTER SYSTEM

The large extraction pre-chamber and three-stage filter unit (pre-filter, main filter and post-filter) guarantee the absolutely reliable function of the double-piston vacuum pump. An automatic filter test program shows the saturation level of the extraction filters. The super-fine filters are on the outside of the unit and are easy to change.

G-F 318

Dental model grinder

Compact dental model milling cutter with powerful, maintenance-free motor and height-adjustable worktable.

- Easy to use
- Health and safety
- Powerful
- Durability
- Compact

TECHNICALLY SOPHISTICATED AND OF THE HIGHEST QUALITY.

With its extremely powerful, maintenance-free motor, our dental model grinder is an excellent companion for the fast and effortless grinding of dental models. Its precise grinding result and even conical surface in the dental model ensure functional reliability and a perfect fit. The G-F 318 E model with integrated extraction unit is remarkable for its extremely high filtration and optimum noise insulation. An external extraction unit can be connected to the G-F 318 EO unit.

PRODUCT ADVANTAGES

- ✓ A high motor speed (~9,000 rpm) and perfectly true running thanks to the precision collet chuck ensure optimum grinding work and efficient working.
- ✓ Integrated tool kit for uncomplicated milling cutter replacement.
- ✓ Detachable worktable for easy cleaning.
- ✓ Two-stage filter system with dust class M for very high health protection (with the G-F 318 E version only).

PRODUCT HIGHLIGHTS

MILLING CUTTER

Diamond-toothed, hard metal milling cutter with a long service life and low noise levels ensures optimum grinding results for the fast and effortless grinding of dental models.

HEIGHT ADJUSTMENT

Our G-F 318 offers additional height adjustment of the work surface, enabling tricky tooth positions to be processed easily. The worktable is individually adapted to the grinding depth using the adjustment wheel. The millimetre scale shows the scale in 1 mm increments.

PRODUCT DETAILS

FILTER TECHNOLOGY (G-F 318 E ONLY)

The integrated extraction unit with automatic cut-out extracts the generated dust directly at the tool and collects it in an easily replaceable fleece bag in the mesh basket, which improves the maximum achievable fill level and optimises the suction power of the unit. Automatic air-flow regulation guarantees a constant suction power regardless of the filter fill level. The filter bags can be tightly sealed when the mesh basket is removed, ensuring dust-free and simple disposal. The large-area filter cartridge, which is downstream from the filter bag, traps 99.98% of even micro-dust with a particle size of 0.5µ, offering optimum health protection.

AUTOMATIC CUT-OUT (G-F 318 E ONLY)

As soon as the fleece bag has reached its maximum permitted fill level, a vacuum switch activates the automatic cut-out. The extraction unit and milling cutter drive are switched off.

Consumables and accessories

Super-fine filter

Fine dust particles in the air are especially dangerous. Damaging effects on skin and respiratory organs have also been found with dental plaster, investment materials and non-classified mixed dust that reached the general dust threshold. For this reason, all Harnisch+Rieth extraction units and blasting units with integrated extraction unit are equipped with super-fine filter cassettes or cartridges.

PRODUCT ADVANTAGES

- ✓ Maximum health and safety protection.
- ✓ Up to 99.98% of micro-dust particles with a grain size of 0.5µ are filtered.

	Art. no.	Material	Dust class	Test standard
D-BS 320 FM	42251	Super-fine filter	M	DIN EN 60335-2-69

Wax extraction technology

Sturdy, stainless-steel wax extraction unit
for up to 6 cuvettes.

Wax extraction unit D-AB 240 | Wax extraction technology consumables and accessories

*The notable quality, endurance and precise functionality of Harnisch+Rieth
equipment provide great support in my daily lab work.*

Master dental technician and senior partner Jan Langner, Schwäbisch Gmünd

D-AB 240

Wax extraction unit

Sturdy, superior-quality wax extraction unit guarantees trouble-free, highly efficient working.

Durability

Compact

Optimum workflow

TECHNICALLY SOPHISTICATED AND OF THE HIGHEST QUALITY.

Our automatic wax extraction unit enables automatic wax extraction of up to 6 cuvette holders. The relevant parameters are immediately recognisable on the user interface, and entry of parameters is intuitive. Infinitely adjustable temperature from 30 - 95 °C with manually adjustable spraying time of up to 15 minutes. Also suitable for the polymerisation of heat-cure acrylic resins.

PRODUCT ADVANTAGES

- ✓ Robust, maintenance-free technology.
- ✓ 6 highly effective nozzles for optimum spraying.
- ✓ Powerful heating rapidly gets the unit to wax extraction temperature.
- ✓ Low water cut-out to protect the heating system.

PRODUCT HIGHLIGHTS

PUMP

At the heart of our wax extraction unit is the powerful and resilient industrial immersible pump made of bronze, which operates with maximum reliability.

CLEANING

The spray pipe is easy to remove, giving you unobstructed access for cleaning the tray. A large-area dirt filter, tightly sealed at the sides with an easily replaceable filter mat, keeps the wax extraction water clean.

FLAP LID

The perforated flap lid is recessed. Smaller parts are easily de-waxed on this, using the integrated hand spray. An easy-to-fit spray guard can be supplied on request.

PRODUCT DETAILS

SENSOR TECHNOLOGY

The high-quality water level sensor, which is located outside the water basin and can therefore never get dirty, indicates water shortages immediately, protecting the heating element.

TECHNICAL DATA

Width	600 mm
Depth	420 mm
Height	425 mm
Electrical connection	230 V; 50 Hz
Power consumption	Heating system 2.3 kW/ pump 0.19 kW
Capacity	max. 18 l/min. 12 l
Weight	approx. 39.5 kg (empty)
Housing	Acid-resistant, rustproof stainless-steel housing

ACCESSORIES

- Wax solvent (page 88)
- Descaling agent (page 88)
- Filter mats (page 88)
- Spray guard article no. 15055

Consumables and accessories

Wax solvent

Our wax solvent is perfectly designed for cleaning our wax extraction unit. Regular cleaning not only ensures the units' longevity, it also guarantees reproducible wax extraction results.

- PE bottles.
- Mixture ratio: 25 ccm WL (wax solvent) 104 to approx. 14 l water.

Article no.	Type	Litres
15050	WL 104	250ml
15051	WL 104	1,000 ml

Subject to change without notice

Descaling agent

Our descaling agent is specially designed for our units and the kind of work they do. When used correctly, it keeps our units functioning reliably and ensures their longevity.

- Ratio 1:10, i.e. add 250 ml descaling agent to 2,500 ml water.
- The exposure time depends on the degree of scaling.
If there is a lot of limescale, the exposure time will be 8 hours minimum.

Article no.	Litres
15271	1,000 ml

Filter mats

The fitted filter pad that traps wax residue is easy to replace and so keeps the water permanently clean.

Milling technology

Introducing a new design for our proven precision!
The new D-F 45 precision milling unit. Durability,
precision and quality – high standards with a makeover.

Precision milling unit D-F 45 | Milling technology consumables and accessories

*The high quality and precision of Harnisch+Rieth equipment
continues to inspire my daily lab work.*

Master dental technician Andreas Kunz, Berlin

D-F 45

Precision milling unit

Durability, precision and quality –
high standards with a makeover!

Powerful

Durability

Easy to use

Compact

Precision

INTRODUCING A NEW DESIGN FOR OUR PROVEN PRECISION!

The D-F 45 precision milling unit with its clear, robust construction and ease of operation is the ideal device for economical, quality milling in the dental laboratory. All milling processes can be completed quickly and precisely. Driven by a robust, state-of-the-art micro-motor and a very quiet milling spindle, the speed is infinitely adjusted from 1,000 to 40,000 rpm, with power remaining consistent.

PRODUCT ADVANTAGES

- ✓ Powerful, extremely quiet milling spindle.
- ✓ Magnetic clamp for the model table.
- ✓ Exceptionally stable design for vibration-free milling.
- ✓ LED light head for optimum illumination.

PRODUCT HIGHLIGHTS

QUALITY

Expectations for a Harnisch+Rieth product are high. That's why we purposefully dispensed with the use of plastics when developing the D-F 45. The exceptionally solid design of the column and milling arm prevent any kind of vibration and therefore produce the best milling results. The housing and jointed arms are made of high-quality aluminium with a robust anodised surface. The guide column and clamping table are made of stainless steel.

MAGNETIC CLAMP

Model tables, milling tables and milling discs can be moved as desired on the electromagnetic worktable or clamped electromagnetically in any position, quickly and securely.

PRODUCT DETAILS

OPTIMUM LIGHTING

With its 4 high-powered LEDs arranged in a circle, the LED light head ensures optimum, shadow-free lighting for the work area.

CONTROL LOGIC

The four-way, ball bearing-mounted double-joint arm moves very easily but is completely without play, It guarantees precise, three-dimensional working with ease of movement. The integrated depth stop enables precise limitation of the vertical range. The drilling jig has a vertically moveable sleeve controlled by a hand lever.

TECHNICAL DATA

Width	175 mm
Depth	320 mm
Height	500 mm
Electrical connection	100-240 V; 50/60 Hz
Power consumption	80 W
Speed	1,000 to 40,000 rpm
Motor torque	7 Ncm

Concentricity	0.015 mm
Collet chuck	Ø 2.35 mm incl. stop (standard) Ø 3.00 mm (optional)
Weight	11.5 kg
Housing	Durable, environmentally friendly anodised aluminium housing

ACCESSORIES

- Measuring spindle clamping range 0.3-3 mm (page 94)
- Model table (page 94)
- Lead holders 2.35 mm and 3.00 mm (page 95)
- Set of milling cutters (page 95)

product details

Consumables and accessories

Model table

Made entirely of non-rusting materials. With large, hardened support surface and 0° catch. The model is clamped quickly and securely in the desired position at an angle of inclination of up to 35° without damage.

Article no.	Type
15047	Model table with magnetic clamp

Milling table

The milling disc is clamped in the milling table. The milling table can either be clamped magnetically or moved manually.

Article no.	Type
15035	Milling table

Ney measuring set

For precisely measuring the denture undercut depth.
Set contents:

- 1x locating pin
- 1x undercut gauge 0.25 mm
- 1x undercut gauge 0.5 mm
- 1x undercut gauge 0.75 mm

Article no.	Type
15156	Set

Milling discs

The object to be worked is securely fixed in the milling disc with plaster. Our milling discs are available with a diameter of 64 mm.

Article no.	Type
15036	Milling table 64 mm

Set of milling cutters

The Harnisch+Rieth set of milling cutters consists of highly precise hard metal milling cutters with specially coordinated shank lengths. The set contains: punch, twist drill, tube bur, shoulder bur, longitudinal teeth milling cutters 0° and 2° for telescopic and conical crowns, and matching wax cutters.

Article no.	Set of milling cutters
15153	2.35 mm

Lead holder and graphic leads

Lead holder for measuring and marking. Suitable for all milling units. Lead diameter: 2 mm	Article no.	Type	Quantity
	15151	Lead holder 2.35 mm	piece
	15152	Lead holder 3.0 mm	piece

LED light head

For optimum illumination of the workpiece. The light is fastened directly to the milling spindle.

Article no.	Type
15158	LED light head

Milling oil

Milling oil for high-quality milled surfaces. Milling oil protects your tools, especially when machining non-precious metals.

Article no.	Type
76854	30 ml

Transfer unit

Measuring spindle for measuring, marking and holding ready-made construction elements.

Article no.	Type
15154	Transfer unit Ø 2.35 mm
15155	Transfer unit Ø 3.00 mm
